

High Speed Internet Access

IN-ROOM INTERNET ACCESS

DYNASYS uses various technologies to make In-Room Internet Access service available to hotel (Rooms & Public Area) guests by Wired category 5e/6 structured cabling systems (Ethernet-) and wireless networks. Internet is now an essential service. Business travelers and vacationers have a need to stay connected. Today's consumers are increasingly tech savvy and value their time more than ever. Offering them a means to productively use their time during their stay at your property, shows how much you value their time and business.

DYNASYS SERVER

DYNASYS server allows the computer / laptop , whether it is configured, to work in a DHCP or Static IP environment. The system also features SMTP redirect and auto detection for client computers possible PPTP and IPSEC protocols, which are quickly becoming more widely used as VPN (virtual Private Network) become more common. With a true plug and play solution, with customized login page. Hotel can do promotions and run advertisement in the login page.

SECURITY

- The DYNASYS Solution separates guest network and hotel LAN/WLAN.
- VLAN technology prevents guest-to-guest direct connection.
- Security features are updated remotely to ensure potential risks are eliminated. DYNASYS solution supports major VPN platforms and new ones are being added.
- Monitoring and reporting in various levels.

PMS LINK

- Dynasy Server Can be connected to a number of PMS systems namely Fidelio 8, Micros Opera 5, Protel, WinHMS, IDS, SHAWMAN PMS, etc.
- PMS link provides facility to post charges directly to the guest folio.
- Provides automatic check in, check out and room transfer features.

ACCESS CONTROL

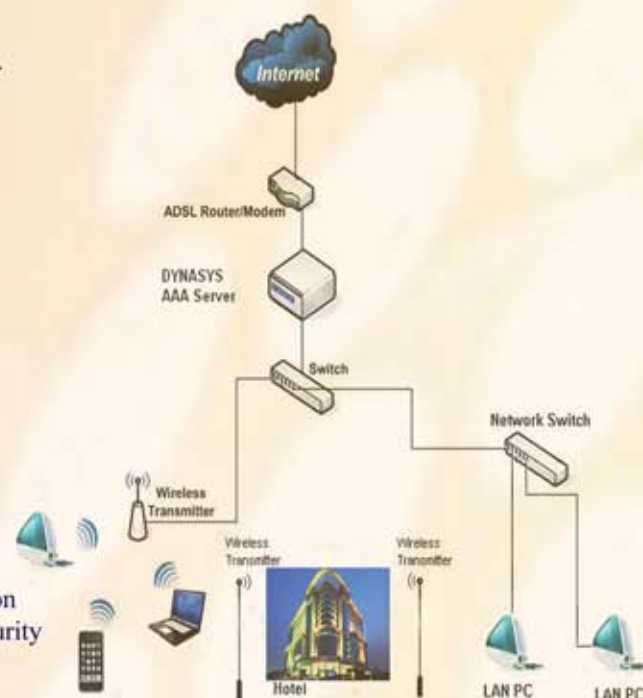

- When guest launches the browser, the guest will be redirects to authorization screen. The web page layout can be changed. Also provides additional security by not allowing guest to browse the internet till the guest is authenticated.
- Configurable guest authentication:
- SMS Authentication
